## Expression of results

RESULT	EFFECT OF THE TEST AFTER CLEANING
0	Not sensitive
1	Not very sensitive
2	Low sensitive
3	Sensitive
4	Very sensitive

For a better appreciation of the result, the result from 1 to 4 is completed with another indicator c (like colouration) or d (like deterioration):

- The **c** indicator is linked to the aesthetical aspect of the flooring
- The **d** indicator is the factor which directly influences the maintenance conditions of the flooring.

**Reminder:** cleaning of iodised alcohol stains

1. immediate action: soak up with a cloth
2. later action: apply an impregnated cloth with a mix made of 75% bleach and 25% non-coloured ethylic alcohol to the stain for several hours. Repeat action if necessary.

### WARNING:

- the preparation must be done with protection (gloves, glasses) and in small quantity: < 1l
- pour the alcohol in the bleach carefully, because of calories emission, it must not be prepared in a closed bottle.

## RESISTANCE TO STAINING

The test consists in measuring the resistance of the floorcovering to chemical products to which it can be exposed during its usage. These different chemical products (liquid or solid) are applied on a sample during a precise period (5min, 2 hours or 24 hours). After cleaning, the change of aspect is noted (colouration, deterioration etc...). The test is based on the EN 423 / EN ISO 26987 norm.

N°	OPERATION	METHOD	ILLUSTRATION
1	<b>Preparation of samples</b>	<ol style="list-style-type: none"> <li>1. Cut a A4 sample.</li> <li>2. Cut a 4x4cm piece of absorbing paper for every test with a liquid product.</li> </ol>	
2	<b>Application of the staining liquids</b>	<ol style="list-style-type: none"> <li>1. For every tested liquid product, apply a piece of absorbing paper on the sample.</li> <li>2. Mark with a marker pen the space corresponding to every products used.</li> <li>3. Soak the clothe with 10 droplets of liquid product.</li> <li>4. Apply a strip of glass on the textile squares soaked with products.</li> </ol>	  
3	<b>Time of contact</b>	<ol style="list-style-type: none"> <li>1. Leave the product in contact with the surface of the flooring for 2hours*.</li> </ol>	
4	<b>Cleaning</b>	<ol style="list-style-type: none"> <li>1. Remove and clean the glass strip with ethanol.</li> <li>2. Remove and throw away the absorbing paper squares.</li> <li>3. Take off with a spatula the remaining solid products.</li> <li>4. Clean the stains with a cloth impregnated with ethanol until a colouration appears on the cloth.</li> <li>5. Evaluate the resistance to staining of the flooring for every tested product.</li> </ol>	  

\* Remark: If it is a 5 min test, the protocol is different.  
The product is directly in contact with the flooring (without absorbing paper and glass strip)
