

TARAFLEX ISOLSPORT is a compact 1.65 mm thick underlayer that weighs 1.35 kg/m². It comes in rolls of 2 m width and 45 lm length. This underlay is made from PVC coated on a fiberglass veil, and has pads on the reverse side to allow moisture to diffuse into the drainage space created.

It is loose-laid before the sports flooring TARAFLEX EVOLUTION, TARAFLEX PERFORMANCE or TARAFLEX MULTI-USE. This system allows any rising damp to diffuse into the drainage space provided in the underlay. The entire system has a fire rating of Cfl,s1 (EN ISO 13501-1).

The manufacturer must be able to supply on request a declaration of performance and a certificate of compliance with standard EN14904, produced by an independent laboratory, for each system combining **TARAFLEX ISOLSPORT** underlay with the TARAFLEX sports floor coverings mentioned above.
