

ENVIRONMENTAL PRODUCT DECLARATION

MIPOLAM EVO

GERFLOR MIPOLAM EVO HOMOGENEOUS COMMERCIAL FLOORING

Mipolam EVO – Homogeneous flooring system with Evercare® surface treatment

Because we think actions speak louder than words, Gerflor has always been willing to act and to develop flooring solutions that meet the most challenging requirements in term of design, durability, easy installation, water tightness, ... When it comes to sustainability, we also set ourselves to the highest standards. We believe in developing great products that not only perform, but also contribute to achieving high indoor air quality and top contribution to all green building certification schemes.

Mipolam Evo is :

- 100% Floorscore, Blue Angel certified and M1 certified meaning that our products has been independently third party certified to comply with strict volatile organic compounds (VOC) emissions criteria.
- Free of chlorine and plasticizer
- 100% REACH compliant (voluntarily independently Third Party Verified)

ENVIRONMENTAL PRODUCT DECLARATION

MIPOLAM EVO
Homogeneous commercial flooring

According to ISO 14025,
EN 15804, and ISO 21930:2017

EPD PROGRAM AND PROGRAM OPERATOR NAME, ADDRESS, LOGO, AND WEBSITE	UL Environment 333 Pfingsten Road, Northbrook, IL 60611	https://www.ul.com/ https://spot.ul.com
GENERAL PROGRAM INSTRUCTIONS AND VERSION NUMBER	General Program Instructions v.2.4 July 2018	
MANUFACTURER NAME AND ADDRESS	GERFLOR 50 Cours de la République, 69100 Villeurbanne, France	
DECLARATION NUMBER	4789696077.101.2	
DECLARED PRODUCT & FUNCTIONAL UNIT OR DECLARED UNIT	MIPOLAM EVO The functional unit used for this study is 1m ² of homogeneous commercial flooring, for a 25 years service life, and for a building estimated service life of 75 years.	
REFERENCE PCR AND VERSION NUMBER	PCR -Part A: Life Cycle Assessment Calculation Rules and Report Requirements. Version 3.2, UL Environment. PCR - Part B: Flooring EPD Requirements, Second Edition, Dated September 28, 2018, UL Environment.	
DESCRIPTION OF PRODUCT APPLICATION/USE	The product is classified in accordance with EN ISO 10874 and in reference to the FCSS (Floor Covering Standard Symbols) to be installed in various areas of application including commercial and industrial applications.	
PRODUCT RSL DESCRIPTION (IF APPL.)	The stated RSL is 25 years. The manufacturer has provided this service life on the basis of his experience of flooring manufacture and supply. The ESL is 75 years, so two replacements are required.	
MARKETS OF APPLICABILITY	Commercial market	
DATE OF ISSUE	January 1, 2021 (Data update January 2024)	
PERIOD OF VALIDITY	5 years	
EPD TYPE	product-specific	
RANGE OF DATASET VARIABILITY	not concerned	
EPD SCOPE	Cradle to Grave	
YEAR(S) OF REPORTED PRIMARY DATA	2019	
LCA SOFTWARE & VERSION NUMBER	Simapro 9	
LCI DATABASE(S) & VERSION NUMBER	Ecoinvent 3.6 – allocation cut-off by classification

LIMITATIONS

Exclusions: EPDs do not indicate that any environmental or social performance benchmarks are met, and there may be impacts that they do not encompass. LCAs do not typically address the site-specific environmental impacts of raw material extraction, nor are they meant to assess human health toxicity. EPDs can complement but cannot replace tools and certifications that are designed to address these impacts and/or set performance thresholds – e.g. Type 1 certifications, health assessments and declarations, environmental impact assessments, etc.

Accuracy of Results: EPDs regularly rely on estimations of impacts; the level of accuracy in estimation of effect differs for any particular product line and reported impact.

Comparability: EPDs from different programs may not be comparable. Full conformance with a PCR allows EPD comparability only when all stages of a life cycle have been considered. However, variations and deviations are possible. Example of variations: Different LCA software and background LCI datasets may lead to differences results for upstream or downstream of the life cycle stages declared.

1. Product Definition and Information

1.1. Description of Company/Organization

The product is commercialized by Gerflor and made in Troisdorf Manufacturing Plant (Germany). This plant complies with:

- ISO 9001 Quality Management System
- ISO 14001 Environmental Management System
- ISO 45001 Occupational Health and Safety System
- ISO 50001 Energy Management

1.2. Product Description

Product Identification

Product Designation: "MIPOLAM EVO"

This environmental product declaration covers Gerflor Mipolam EVO sheet flooring. Mipolam EVO sheet flooring is a 6'6" (2m) wide calendered homogeneous sheet flooring with 2.0mm thickness. The flooring is protected by Evercare® surface treatment that provides easy maintenance, stain resistance and reduces the need to refinish the flooring.

The homogeneous flooring are classified according to the United Nations Standard Products and Service Code (UNSPSC) as "Flooring" : UNSPSC Code 30161700.

And according to Construction Specification Institute (CSI) as "Resilient flooring" : CSI Code 09 65 00.

The following figure show the Mipolam EVO Product:

1. Evercare® Treatment
2. Monolayer homogeneous flooring, calendered and pressed

MIPOLAM EVO

Homogeneous commercial flooring

According to ISO 14025,
EN 15804 and ISO 21930:2017

Product Specification

The products considered in this EPD meet or exceed one of the following Technical Specifications:

Meets or exceeds all technical requirements in ASTM F1913 Standard Specification for Vinyl Sheet Floor Covering Without Backing

Meets or exceeds all technical requirements in EN ISO 19322:2018 – Resilient floor coverings – Specification for floor coverings based on thermoplastic polymers.

Mipolam EVO homogeneous sheet flooring meets requirements of the standard EN 14041 – Resilient, textile and stratified floor coverings: Essential characteristics.

Specification Fire Testing:

Class 1 when tested in accordance with ASTM E 648, Standard Test Method for Critical Radiant Flux

Flaming & Non-Flaming when tested in accordance with ASTM E 662, Standard Test Method for Specific Optical Density of Smoke Generated by Solid Materials

The product also possesses the following characteristics:

- EN 13501-1 Fire Behavior B_{fl}-s1
- DIN 51130 / BGR 181 Slip Resistance R10
- 100% Floorscore, Blue Angel certified and M1 certified

Flow Diagram

ENVIRONMENTAL PRODUCT DECLARATION

MIPOLAM EVO
Homogeneous commercial flooring

According to ISO 14025,
EN 15804 and ISO 21930:2017

1.3. Application

Mipolam Evo classified in accordance with EN ISO 10874 and in reference to the FCSS (Floor Covering Standard Symbols) to be installed in various areas of application including commercial and industrial applications.

1.4. Declaration of Methodological Framework

This EPD covers the entire life cycle of the product from cradle to grave (modules A1 to C4) excluding modules for which there are no inputs/outputs. No known flows are deliberately excluded from this EPD.

For this product, the stated RSL is 25 years. It should be noted, however, that the service life of a homogeneous vinyl flooring may vary depending on the amount and nature of floor traffic and the type and frequency of maintenance. The manufacturer has provided this service life on the basis of his experience of flooring manufacture and supply. This RSL is applicable as long as the product use complies with that defined by ISO 14041 and ISO 10 874 in accordance with the product's classification.

1.5. Technical Requirements

Table 1: technical data

Name		Value	Unit
Product Thickness		2.00	mm
Product Weight		2.70	kg/m ²
Product Form	Rolls width	2.00	m
	Rolls length	20.00	m

1.6. Properties of Declared Product as Delivered

The product declared in this document complies with the following codes or regulations:

- ISO 9001 Quality Management System, ISO 14001 Environmental Management System, ISO 45001 Occupational Health and Safety System and ISO 50001 Energy Management
- Blauer Engel – Certificate n°34756

1.7. Material Composition

Table 2: Material content

Component	Mass %
Binder	47.0%
Additive	2.6%
Stabilizer	0.2%
Filler	48.1%
Finish	0.6%
Pigments	1.5%

1.8. Manufacturing

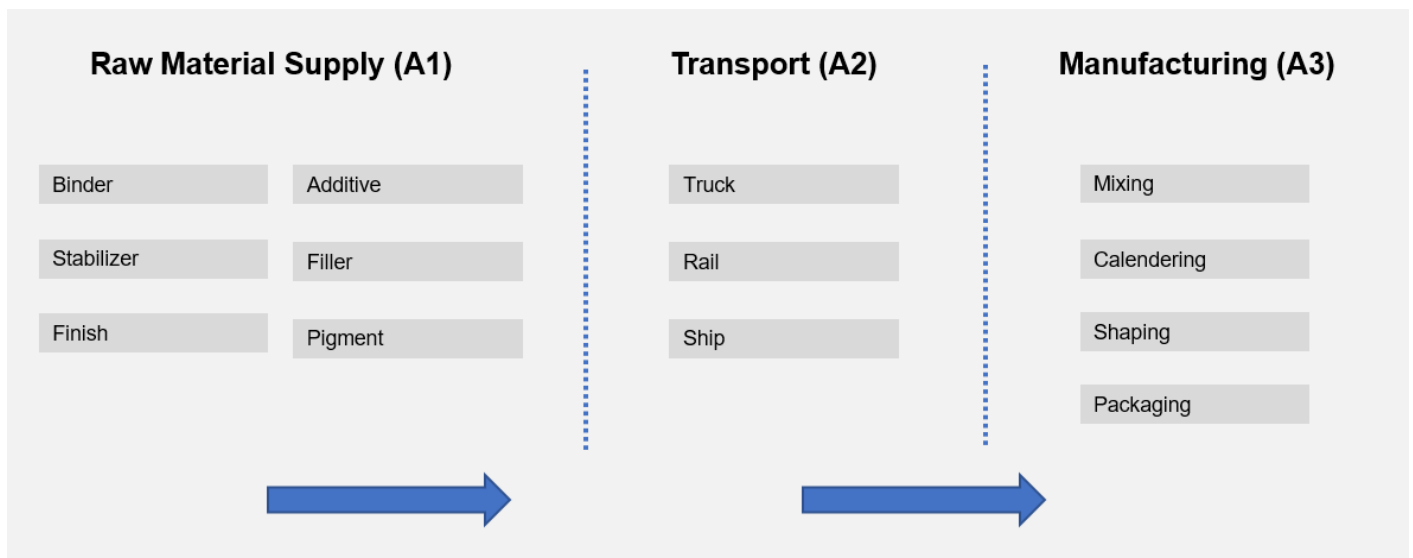

Mipolam EVO is made in the Gerflor manufacturing plant in Troisdorf, Germany.

The production of the homogeneous flooring is divided into the following stages:

- Pellet extrusion
- Mixing: binder, filler, additive, stabiliser, and pigments are mixed together to obtain a mixture.
- Calendering: the mixture are then calendered to get rolls.
- Finish: application of the surface layer
- Shaping: rolls are cut at the desired dimensions.
- Packaging: the final product is packed into kraft paper with protection endcaps. Several rolls are placed into pallet then wrapped with plastic film.

Wastes from manufacturing are recycled back into production when possible. Other wastes products are recycled externally whenever a process exists.

Figure 2: Manufacturing Flow diagram

1.9. Packaging

The products are rolled and packed into paper with endcaps. Rolls are placed into pallets wrapped with plastic film.

The packaging waste scenario for paper and cardboard is 75% recycling, 20% landfilling and 5% incineration as describe in ULE Part A Requirements. Other materials are sent to landfill (50%) or incinerated (50%).

1.10. Transportation

Mipolam EVO is made in Germany and is then sent to the US market. Distances taken in account are described below.

- Transport distance 16-32T truck (factory to Belgium port: Antwerp): 226km
- Transport distance transoceanic freight (Antwerp port to Montreal port): 6102km
- Transport distance freight train (Montreal to Chicago): 1357km
- Transport distance 16-32T truck (Chicago to Bensenville warehouse and then to customer in Denver): 1630km

1.11. Product Installation

The product is installed by hand using acrylic glue. 325 g/m² of this water-based low emission adhesive is used to fix the flooring in place.

During the installation 7% of the material is lost as off-cuts – this waste is sent to landfill. Waste classification is according to RCRA for North American region (Resource Conservation and Recovery Act (RCRA), Subtitle 3).

1.12. Use

Current cleaning of the installed floor has been included in this study as following:

- Dry vacuum cleaning : twice a week
- Wet cleaning by hand with water and detergent: once a week

1.13. Reference Service Life and Estimated Building Service Life

For this product, the stated RSL is 25 years and the building estimated service life (ESL) is 75 years. It should be noted however that the service life of a homogeneous flooring may vary depending on the amount and nature of floor traffic and the type and frequency of maintenance. The manufacturer has provided this service life on the basis of his experience of flooring manufacture and supply. This RSL is applicable as long as the product use complies with ISO 14041 and ISO 10874 in accordance with the product's classification. The number of replacements necessary to fulfill the required performance and functionality over the Building Estimated Service Life of 75 years is two

1.14. Reuse, Recycling, and Energy Recovery

A back programm and re-use/recycling/energy recovery possibility are in progress for this product.

1.15. Disposal

For the purpose of this LCA, it has been assumed that 100% of the product is sent to landfill at the end of its useful life, according to the disposal pathway assumption in PCR Part A for non-metal materials in United States. Product is considered as non-hazardous waste according to north america regulation.

The transport between construction site and landfill facility is by truck, with a distance of 161 km.

2. Life Cycle Assessment Background Information

2.1. Functional or Declared Unit

The functional unit is one square meter of installed product. The reference service life considered is 25 years.

Table 3: Functional Unit

	Value	Unit
Functional Unit	1	m ²
Mass	2.70	kg

2.2. System Boundary

EPD is declared from cradle to grave, including the following stages:

A1 – A3: includes the provision of all raw materials and their packaging, transport to the production site and energy consumption during the manufacturing of the product, as well as processing of waste generated by the factory.

A4 – A5: includes the transport from the factory to the final customer, packaging of the final product and the installation of the product, as well as all consumables and energy required and processing of waste generated during the installation.

B1 – B7: includes provision and transport of all materials, products and services related to the use phase of the product, as well as their related energy and water consumption, and the processing of any resulting waste.

C1 – C4: includes provision and transport of all materials, products and services related to the end of life phase of the product, including energy and water consumption, as well as the end of life processing of the product.

2.3. Estimates and Assumptions

Estimates and assumptions are made for transport, installation and deconstruction procedure. Details are provided in section “LCA: scenarios and additional technical information”.

Transport distances have been calculated from the production site to the geographical center of the destination country (US), which provides an average distance for all possible distribution centers within the country. Additional transport between the distribution center and the construction site is considered with a distance of 800 km, according to PCR, part B.

Transport distance from building site to the landfill treatment center is considered with a distance of 161 km, according to PCR part B.

2.4. Cut-off Criteria

The cut-off criteria shall be 1% of renewable and non-renewable primary energy usage and 1% of the total mass of that unit process. The total neglected input flows per module shall be a maximum of 5% of energy usage and mass.

For this study, all input and output flows have been considered except packaging of raw material, Raw materials are included as per the product composition provided by the manufacturer and the packaging of the final product. Energy and water consumptions have also been considered at 100% according to the data provided.

2.5. Data Sources

As a general rule, specific data derived from specific production processes or average data derived from specific production processes have been used as the first choice as a basis for calculating an EPD.

To model the life cycle of the product in question, the software SimaPro 9, developed by PRé, has been used in conjunction with the LCA database ecoinvent v3.6.

2.6. Data Quality

The requirements for data quality and LCA data are in accordance with the specifications of the PCR.

Temporal Coverage – producer specific data is averaged over 1 year of production and from within the last 5 years (2019). Generic data is taken from the ecoinvent 3.6 database, the entirety of which was updated in 2019. Inputs to and outputs from the system are accounted for over a period of 100 years from the year for which the data set is deemed relevant.

Technological Coverage – the technological coverage of the data reflects the physical reality of the declared product.

Geographical Coverage – whenever possible, country specific data reflecting the reality of the Gerflor supply chain has been used. If country specific data is unavailable, European regional data is used in preference to global data sources.

2.7. Period under Review

Data have been reviewed for the production year 2019.

2.8. Allocation

The overall values for the factory's material and energy consumptions during a period of one year have been divided by the annual production of each product to supply a value per square meter of flooring produced. All factory data is measured in square meters, and it is assumed that the process consumptions are governed by area of flooring processed rather than mass.

2.9. Comparability (Optional)

Basically, a comparison or an evaluation of EPD data is only possible if all the data sets to be compared were created according to /EN 15804/ and the building context, respectively the product-specific characteristics of performance, are taken into account.

3. Life Cycle Assessment Scenarios

Table 4. Transport to the building site (A4)

NAME	VALUE	UNIT
Truck		
Fuel type	Diesel, low sulfur	
Liters of fuel	26	l/100km
Vehicle type	16-32 metric ton EURO 5	
Transport distance	1856	km
Capacity utilization (including empty runs, mass based)	36	%
Gross density of products transported	1350	kg/m ³
Weight of products transported (if gross density not reported)	-	kg
Volume of products transported (if gross density not reported)	-	m ³
Capacity utilization volume factor (factor: =1 or <1 or ≥ 1 for compressed or nested packaging products)	< 1	-
Boat		
Fuel type	Heavy Fuel Oil	
Liters of fuel	0.047	l/100km
Vehicle type	Transoceanic Ship	
Transport distance	6102	km
Capacity utilization (including empty runs, mass based)	100	%
Gross density of products transported	1350	kg/m ³
Weight of products transported (if gross density not reported)	-	kg
Volume of products transported (if gross density not reported)	-	m ³
Capacity utilization volume factor (factor: =1 or <1 or ≥ 1 for compressed or nested packaging products)	< 1	-
Rail		
Energy type	Diesel and electricity	
Percentage diesel / electricity	56.3 / 43.7	%
Vehicle type	Freight train Europe without Switzerland	
Transport distance	1357	km
Capacity utilization (including empty runs, mass based)	100	%
Gross density of products transported	1350	kg/m ³
Weight of products transported (if gross density not reported)	-	kg
Volume of products transported (if gross density not reported)	-	m ³
Capacity utilization volume factor (factor: =1 or <1 or ≥ 1 for compressed or nested packaging products)	< 1	-

BCRP: Biogenic Carbon Removal from Product / BCEP: Biogenic Carbon Emission from Product / BCRK: Biogenic Carbon Removal from Packaging / BCEK: Biogenic Carbon Emission from Packaging / BCEW: Biogenic Carbon Emission from Combustion of Waste from Renewable Sources Used in Production Processes / CCE: Calcination Carbon Emissions / CCR: Carbonation Carbon Removals / CWNR: Carbon Emissions from Combustion of Waste from Non-Renewable Sources used in Production Processes

5. LCA Interpretation

Figure 3: Graph depicting the impact indicators as calculated by the TRACI method

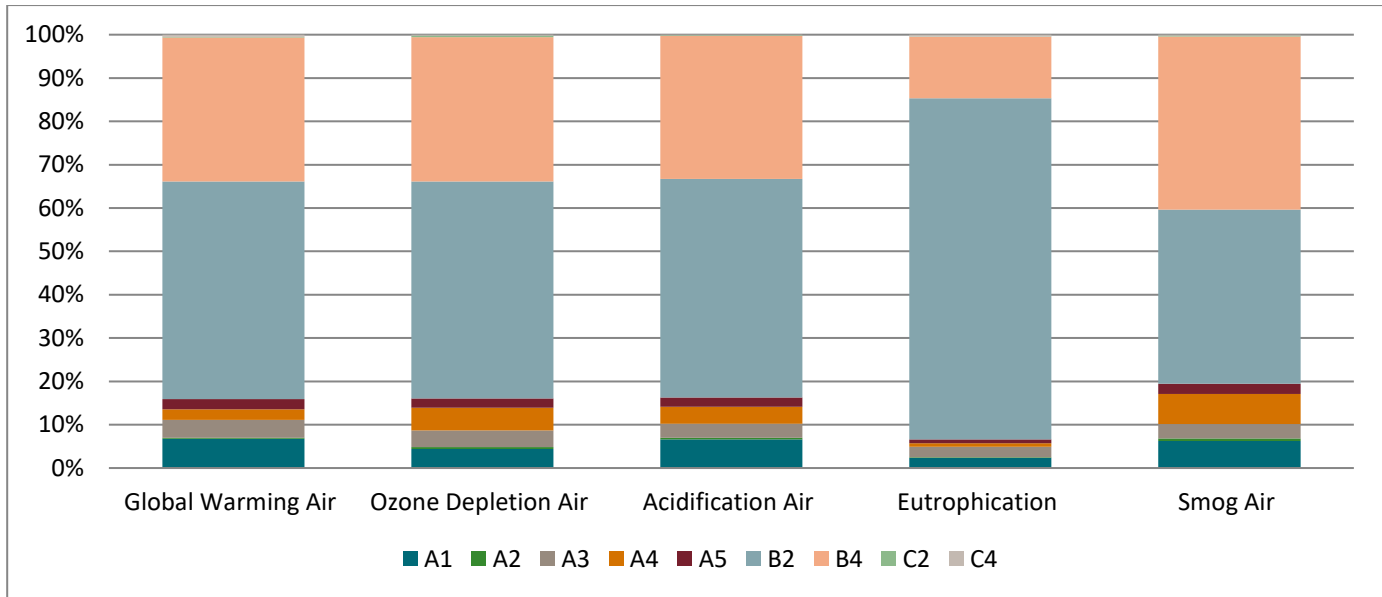

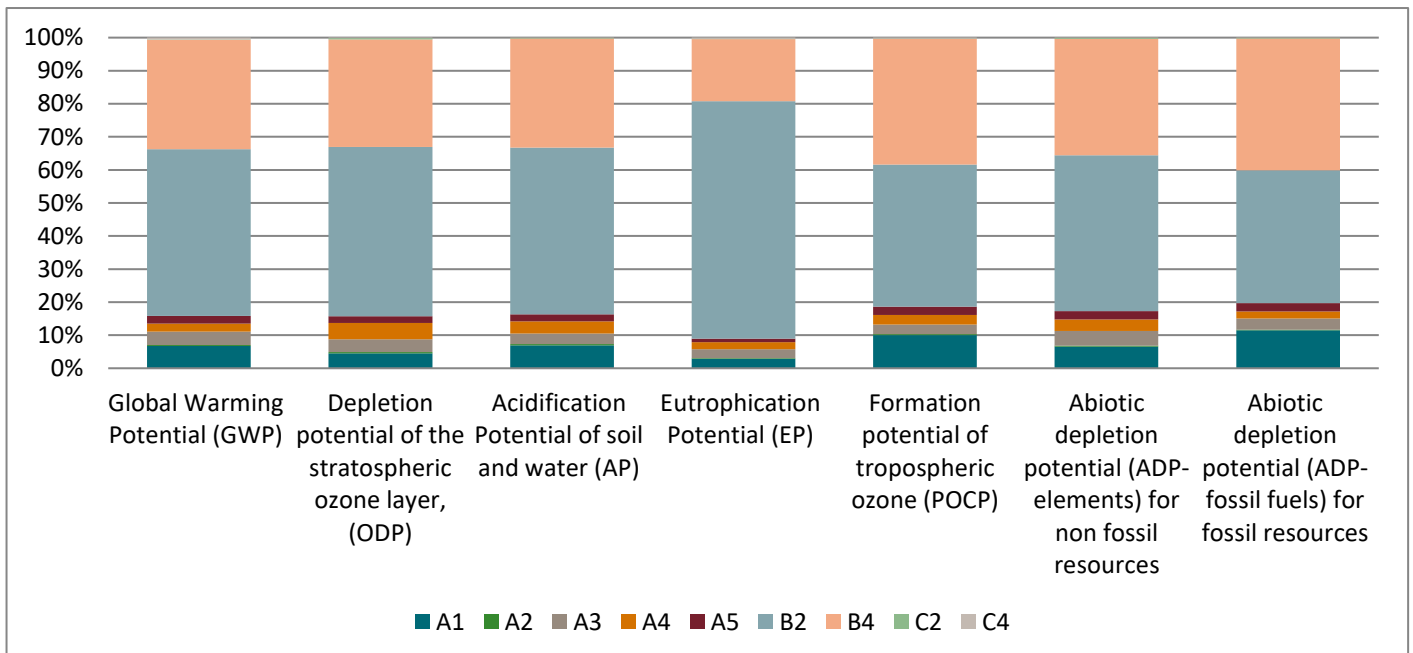

Figure 4: Graph depicting selection of impact indicator results calculated according to EN 15804

MIPOLAM EVO

Homogeneous commercial flooring

According to ISO 14025,
EN 15804 and ISO 21930:2017

The primary contributor to the environmental impacts of the product is B2 – Maintenance stage because of the scenario of both long reference service life (RSL) of 75 years and the assumption of a weekly cleaning by using a machine and detergent. Then comes B4 – Replacement, which requires the production of two additional products. Then A1 – Extraction and transformation of the raw materials. Stage A3 – Manufacturing has the fourth greatest impact on average across the indicators, primarily due to the electricity consumption during the production process.

6. Additional Environmental Information

6.1. Environment and Health During Manufacturing

Gerflor's factory conforms to the ISO 14001 Environmental Management System, the ISO 45001 Occupational Health and Safety System and the ISO 50001 Energy Management System.

6.2. Environment and Health During Installation

The manufacturer's guidelines should be adhered to during the installation of this product.

6.3. Extraordinary Effects

Fire

Fire behaviour have been tested according to EN 13501-1. Product is classified Bfl-S1.

There's no test available for possible environmental impacts during fire.

Class 1 when tested in accordance with ASTM E 648, Standard Test Method for Critical Radiant Flux

Flaming & Non-Flaming when tested in accordance with ASTM E 662, Standard Test Method for Specific Optical Density of Smoke Generated by Solid Materials

Water

There's no test available for possible impacts following unforeseeable influence of water.

Mechanical Destruction

Mechanical damage does not chemically alter the product.

6.4. Delayed Emissions

No delayed emissions are taken into account.

ENVIRONMENTAL PRODUCT DECLARATION

MIPOLAM EVO
Homogeneous commercial flooring

According to ISO 14025,
EN 15804 and ISO 21930:2017

6.5. Environmental Activities and Certifications

Certificate n°34756

Approved by Foundation
RTS sr

FloorScore®
Indoor Air Quality Certified to SCS-EC10.3-2014 v4.0
Registration # SCS-FS-02145

6.6. Further Information

Additional information can be found in <https://www.gerflor.com/>

7. Supporting Documentation

All documentation necessary to confirm the data provided in this EPD has been submitted to the critical reviewer.
