

ENVIRONMENTAL PRODUCT DECLARATION

TARALAY PREMIUM CONFORT

HETEROGENEOUS VINYL FLOORING

Heterogeneous vinyl flooring – Taralay Premium Confort

Because we think actions speak louder than words, Gerflor has always been willing to act and to develop flooring solutions that meet the most challenging requirements in term of design, durability, easy installation, acoustic comfort, ...

When it comes to sustainability, we also set ourselves to the highest standards. We believe in developing great products that not only perform, but also contribute to achieving high indoor air quality and top contribution to all green building certification schemes.

Taralay Premium Confort vinyl flooring:

- According to ISO 22196 and ISO 21702, it has, respectively, anti-bacterial activity against MRSA of 99% after 24h00 and anti-viral activity against human coronavirus 229E of 99.7% after 2h00.
- The product emission rate of volatile organic compounds is $< 10 \mu\text{g}/\text{m}^3$ (TVOC after 28 days – ISO 16000 -6).
- They have an exclusive and patented Evercare™ surface treatment which allowed easy maintenance, no wax for life and high stain resistance.
- They have the Floorscore® certification.

Taralay Premium Confort is developed with a view to optimize the environmental impact at every stage of the product's life. This includes assessment of the manufacture, installation, ongoing maintenance, eventual uplift, and recycling of the products. As part of this commitment, Gerflor has decided to take a leadership position by publishing a third party independently verified EPD for each of its product ranges.

This life cycle assessment was conducted in accordance with ISO 14044 and the reference PCR by:

Tomas P. Gloria, Industrial Ecology Consultants

LIMITATIONS

Exclusions: EPDs do not indicate that any environmental or social performance benchmarks are met, and there may be impacts that they do not encompass. LCAs do not typically address the site-specific environmental impacts of raw material extraction, nor are they meant to assess human health toxicity. EPDs can complement but cannot replace tools and certifications that are designed to address these impacts and/or set performance thresholds – e.g. Type 1 certifications, health assessments and declarations, environmental impact assessments, etc.

Accuracy of Results: EPDs regularly rely on estimations of impacts; the level of accuracy in estimation of effect differs for any particular product line and reported impact.

Comparability: EPDs from different programs may not be comparable. Full conformance with a PCR allows EPD comparability only when all stages of a life cycle have been considered. However, variations and deviations are possible. Example of variations: Different LCA software and background LCI datasets may lead to differences results for upstream or downstream of the life cycle stages declared.

1. Product Definition and Information

1.1. Description of Company/Organization

The product is commercialized by Gerflor and made in Tarare Manufacturing Plant (France). This plant complies with:

- ISO 9001 Quality Management System
- ISO 14001 Environmental Management System
- ISO 50001 Energy Management System

1.2. Product Description

Product Identification

Product Designation: "Taralay Premium Confort"

This environmental product declaration covers Gerflor Taralay Premium Confort Heterogeneous Vinyl Flooring. Taralay Premium Confort flooring is presented in rolls of 3.0mm thickness. It is protected by Evercare™ surface treatment that provides easy maintenance, stain resistance and reduces the need to refinish the flooring.

The Taralay Premium Confort Flooring is classified according to the United Nations Standard Products and Service Code (UNSPSC) as "Flooring" : UNSPSC Code 30161700.

And according to Construction Specification Institute (CSI) as "Resilient flooring" : CSI Code 09 65 00.

The following figure shows Taralay Premium Confort vinyl flooring :

Figure 1: Taralay Premium Confort flooring's illustration

ENVIRONMENTAL PRODUCT DECLARATION

Taralay Premium Confort
Heterogeneous vinyl flooring

According to ISO 14025,
EN 15804 and ISO 21930:2017

Product Specification

The product considered in this EPD meets or exceeds one of the following Technical Specifications:

Meets or exceeds all technical requirements in EN ISO 11638 – Resilient floor coverings — Heterogeneous poly(vinyl chloride) flooring on foam — Specification

Taralay Premium Confort heterogeneous vinyl flooring meets requirements of the standard EN 14041 – Resilient, textile and stratified floor coverings: Essential characteristics.

Specification Fire Testing:

Class 1 when tested in accordance with ASTM E 648, Standard Test Method for Critical Radiant Flux

Class 1 when tested in accordance with ASTM E 662, Standard Test Method for Specific Optical Density of Smoke Generated by Solid Materials

The product also possesses the following characteristics:

- EN 13501-1 Fire Behavior C_{fi} – s1
- DIN 51 130 Slip Resistance R10
- M1 certified
- 100% Floorscore

Taralay Premium Confort
Heterogeneous vinyl flooring

According to ISO 14025,
EN 15804 and ISO 21930:2017

Flow Diagram

Figure 2: Flow product diagram

1.3. Application

Taralay Premium Confort is classified in accordance with EN ISO 10874 and in reference to the FCSS (Floor Covering Standard Symbols) to be installed in various areas of application including commercial, education and healthcare environments.

1.4. Declaration of Methodological Framework

This EPD covers the entire life cycle of the product from cradle to grave (modules A1 to C4) excluding modules for which there are no inputs/outputs. No known flows are deliberately excluded from this EPD.

For this product, the stated RSL is 25 years. It should be noted, however, that the service life of a heterogeneous vinyl flooring may vary depending on the amount and nature of floor traffic and the type and frequency of maintenance. The manufacturer has provided this service life on the basis of his experience of flooring manufacture and supply. This RSL is applicable as long as the product use complies with that defined by ISO 14041 and ISO 10 874 in accordance with the product's classification.

1.5. Technical Requirements

Table 1: Technical data

Name		Value	Unit
Product Thickness		3.00	mm
Product Weight		2.80	kg/m ²
Product Form	Sheet width	200	cm
	Sheet length	25	ml

1.6. Properties of Declared Product as Delivered

The product declared in this document complies with the following codes or regulations:

- ISO 9001 Quality Management System, ISO 14001 Environmental Management System and ISO 50001 Energy Management System
- Floorscore SCS-FS-02145

1.7. Material Composition

Table 2: Material content

Component	Mass %
Binder	50-60%
Plasticizer	20-30%
Stabilizer	< 5%
Filler	10-20%
Finish	< 1%
Additive	< 1%
Pigments	< 1%
Reinforcement	< 5%
Packaging	< 5%

1.8. Manufacturing

Taralay Premium Confort heterogeneous collection is made in the Gerflor manufacturing plant in Tarare, in France.

The production of the sheets is divided into the following stages:

- Mixing: Binder, filler, plasticizer, additive, stabilizer, and pigments are mixed to obtain mixture
- Calendering: The rolls are then calendered to get the desired shape.
- Reinforcement and finish.
- Shaping: rolls are cut at the desired dimensions.
- Surface treatment: The Evercare™ surface treatment is then applied to get the best durability possible.

Figure 3: Manufacturing flow diagram

1.9. Packaging

The product is packed around a tube and hubs made of 100% recycled cardboard. The whole being surrounded by a polyethylene film.

- The packaging waste scenario for US market for paper and cardboard is 75% recycling, 20% landfilling and 5% incineration as describe in ULE Part A Requirements. For plastic film, the scenario is 15% recycling, 68% landfilling and 17% incineration.
- According to the Ecoinvent datas, the packaging waste scenario for Norway represents 92% against 8% of landfill.

ENVIRONMENTAL PRODUCT DECLARATION

Taralay Premium Confort
Heterogeneous vinyl flooring

According to ISO 14025,
EN 15804 and ISO 21930:2017

1.10. Transportation

Taralay Premium Confort heterogeneous collection is made in France and is then sent to the Norwegian market or US market. Distances taken in account are described below.

MEANS OF TRANSPORT	NORWEGIAN MARKET		US MARKET	
	Journey	Distance (km)	Journey	Distance (km)
Road – 16-32T Truck	From Tarare factory to Belgium port: Zeebrugge	790	From Tarare to the port of Fos-Sur-Mer	340
Boat	Zeebrugge to Swedish's port: Goteborg	1007	Fos-Sur-Mer to Montreal	7167
Train			Montreal to Chicago	1357
Road – 16-32T Truck	Goteborg port to Norwegian's warehouse: Vestby, and then to customer	679	Chicago to Bensenville warehouse and then to customer in Denver	2434

1.11. Product Installation

The product is installed by using acrylic glue. Approximately 250 g/m² of this water-based low emission adhesive is used to fix the flooring in place.

During the installation approximately 10% of the material is lost as off-cuts – this waste is mainly sent to landfilled for US and Norwegian market. Waste classification is according to RCRA for North American region (Resource Conservation and Recovery Act (RCRA), Subtitle 3).

1.12. Use

Current cleaning of the installed floor has been included in this study as following:

- Dry vacuum cleaning : twice a week
- Wet cleaning by hand with water and detergent: once a week.

Taralay Premium Confort
Heterogeneous vinyl flooring

According to ISO 14025,
EN 15804 and ISO 21930:2017

1.13. Reference Service Life and Building Estimated Service Life

For this product, the stated RSL is 25 years. It should be noted however that the service life of Taralay Premium Confort heterogeneous flooring may vary depending on the amount and nature of floor traffic and the type and frequency of maintenance. The manufacturer has provided this service life on the basis of his experience of flooring manufacture and supply. This RSL is applicable as long as the product use complies with ISO 14041 and ISO 10874 in accordance with the product's classification. The number of replacements necessary to fulfill the required performance and functionality over the construction works Estimated Service Life of 75 years is three times.

1.14. Reuse, Recycling, and Energy Recovery

There is a collection for recycling available on request for this product.

1.15. Disposal

For the purpose of this LCA, it has been assumed that 92% of the product is sent to incineration and 8% to landfill at the end of its useful life, according to the Ecoinvent datas and the producer's feedback for Norwegian market. The product is sent to landfill site for US market. Product is considered as non-hazardous waste according to north america regulation.

The transport between construction site and incineration/landfill facility is by truck, with a distance of 161 km. There is no specific data for this distance for Norwegian market, so the North America's one is assumed by default.

2. Life Cycle Assessment Background Information

A full Life Cycle Assessment has been performed according to ISO 14040, ISO 14044 and in compliance with EN15804.

2.1. Functional or Declared Unit

The functional unit is one square meter of installed product. The reference service life considered is 25 years.

Table 3: Functional Unit

	Value	Unit
Functional Unit	1	m²
Mass	2.80	kg

2.2. System Boundary

EPD is declared from cradle to grave, including the following stages:

A1 – A3: includes the provision of all raw materials and their packaging, transport to the production site and energy consumption during the manufacturing of the product, as well as processing of waste generated by the factory.

A4 – A5: includes the transport from the factory to the final customer, packaging of the final product and the installation of the product, as well as all consumables and energy required and processing of waste generated during the installation.

B1 – B7: includes provision and transport of all materials, products and services related to the use phase of the product, as well as their related energy and water consumption, and the processing of any resulting waste.

C1 – C4: includes provision and transport of all materials, products and services related to the end of life phase of the product, including energy and water consumption, as well as the end of life processing of the product.

D: includes benefits coming from the wastes' end of life (only for Norway).

Table 4: Scope of the study

	Production Stage			Construction Process Stage		Use Stage							End-of-Life Stage				Benefits & loads beyond syst. Bound.
	Raw material supply	Transport to manufacturer	Manufacturing	Transport from gate to site	Assembly/Install	Use	Maintenance	Repair	Replacement	Refurbishment	Operational energy use during product use	Operational water use during product use	Deconstruction	Transport	Waste processing	Disposal	Reuse, recovery or recycling potential
Modules	A1	A2	A3	A4	A5	B1	B2	B3	B4	B5	B6	B7	C1	C2	C3	C4	D
Accounted for:	X	X	X	X	X	X*	X	X*	X*	X*	X*	X*	X*	X	X*	X	X

*module has been considered but has no associated inputs/outputs, therefore does not appear in the results. There is no input for D module for US market, because the product is landfilled.

2.3. Estimates and Assumptions

Estimates and assumptions are made for transport, installation and deconstruction procedure. Details are provided in section "LCA: scenarios and additional technical information".

Transport distances have been calculated from the production site (France) to the warehouse of the destination country (Norway and US).

Additional transport between the distribution center and the construction site is considered with a distance of 800 km, according to PCR, part B for US market. A distance of 424 km is considered for the Norwegian market, according to Gerflor's statements.

Transport distance from building site to the end of life treatment center is considered with a distance of 161 km, according to PCR part B.

2.4. Cut-off Criteria

The cut-off criteria shall be 1% of renewable and non-renewable primary energy usage and 1% of the total mass of that unit process. The total neglected input flows per module shall be a maximum of 5% of energy usage and mass.

For this study, all input and output flows have been considered. Raw materials are included as per the product

composition provided by the manufacturer and the packaging of the final product. Energy and water consumptions have also been considered at 100% according to the data provided.

2.5. Data Sources

As a general rule, specific data derived from specific production processes or average data derived from specific production processes have been used as the first choice as a basis for calculating an EPD.

To model the life cycle of the product in question, the software SimaPro 9, developed by PRé, has been used in conjunction with the LCA database ecoinvent v3.7.1.

2.6. Data Quality

The requirements for data quality and LCA data are in accordance with the specifications of the PCR.

Temporal Coverage – producer specific data is averaged over 1 year of production and from within the last 5 years (2020). Generic data is taken from the ecoinvent 3.7.1 database, the entirety of which was updated in 2020. Inputs and outputs from the system are accounted for over a period of 100 years from the year for which the data set is deemed relevant.

Technological Coverage – the technological coverage of the data reflects the physical reality of the declared product.

Geographical Coverage – whenever possible, country specific data reflecting the reality of the Gerflor supply chain has been used. If country specific data is unavailable, European regional data is used in preference to global data sources.

2.7. Period under Review

Data have been reviewed for the production year 2020.

2.8. Allocation

The overall values for the factory's material and energy consumptions during a period of one year have been divided by the annual production of each product to supply a value per square meter of flooring produced. All factory data is measured in square meters, and it is assumed that the process consumptions are governed by area of flooring processed rather than mass.

2.9. Comparability (Optional)

Basically, a comparison or an evaluation of EPD data is only possible if all the data sets to be compared were created according to /EN 15804/ and the building context, respectively the product-specific characteristics of performance, are taken into account.

3. Life Cycle Assessment Scenarios

For US market:

Table 5. Transport to the building site (A4)

NAME	VALUE	UNIT
Truck		
Fuel type	Diesel, low sulfur	
Liters of fuel	26	l/100km

Taralay Premium Confort
Heterogeneous vinyl flooring

According to ISO 14025,
EN 15804 and ISO 21930:2017

5. LCA Interpretation

Figure 4: Graph depicting the impact indicators as calculated by the TRACI method

Taralay Premium Confort
Heterogeneous vinyl flooring

According to ISO 14025,
EN 15804 and ISO 21930:2017

Figure 5: Graph depicting selection of impact indicator results calculated according to EN 15804 – US

Figure 6: Graph depicting selection of impact indicator results calculated according to EN 15804 – Norway

The primary contributor to the environmental impacts of the product is A1 – Extraction and transformation of the raw materials . Then comes B2 – Maintenance stage because of the scenario of both long reference service life (RSL) of 25 years and the assumption of a weekly cleaning by using a machine and detergent. Stages A3 – Manufacturing and C4 – End of life (for Norway) have the following greatest impacts.

6. Additional Environmental Information

6.1. Environment and Health During Manufacturing

Gerflor's factory conforms to the ISO 14001 Environmental Management System and the ISO 50001 Energy Management System.

Gerflor uses 100% certified renewable electricity in its plants.

6.2. Environment and Health During Installation

The manufacturer's guidelines should be adhered to during the installation of this product.

ENVIRONMENTAL PRODUCT DECLARATION

Taralay Premium Confort
Heterogeneous vinyl flooring

According to ISO 14025,
EN 15804 and ISO 21930:2017

6.3. Extraordinary Effects

Fire

Fire behaviour have been tested according to EN 13501-1. Product is classified C_{fl}-S1.
There's no test available for possible environmental impacts during fire.
Class 1 when tested in accordance with ASTM E 648. Standard Test Method for Critical Radiant Flux
Flaming & Non-Flaming when tested in accordance with ASTM E 662. Standard Test Method for Specific Optical
Density of Smoke Generated by Solid Materials

Water

There's no test available for possible impacts following unforeseeable influence of water.

Mechanical Destruction

Mechanical damage does not chemically alter the product.

6.4. Delayed Emissions

No delayed emissions are taken into account.

6.5. Environmental Activities and Certifications

FloorScore®

Indoor Air Quality Certified to SCS-EC10.3-2014 v4.0

Registration

SCS-FS- 02145

6.6. Further Information

Additional information can be found in <https://www.gerflor.com/>

Taralay Premium Confort
Heterogeneous vinyl flooring

According to ISO 14025,
EN 15804 and ISO 21930:2017

7. Supporting Documentation

All documentation necessary to confirm the data provided in this EPD has been submitted to the critical reviewer.
