⁽¹⁾ The purpose of cleaning is to remove dirt. This is primarily done through mechanical action using a scrubber dryer or a single-disc machine. Such cleaning is effective with water if discs in good condition are used.

⁽²⁾ The detergents remain useful in a targeted way to remove stubborn stains.

* The choice of disc depends on the degree of dirt on the floor or the shine to be achieved (see table : disc used for mechanical maintenance).

**Product distributed by Gerflor.

DISCS USED IN MECHANICAL MAINTENANCE			
OPERATION	RECOMMENDED DISC		
CLEANING BEFORE FIRST USE (250-400 rpm)	 Red disk Normal site	 Blue disk For very dirty sites	
MAINTENANCE AND CLEANING (250-400 rpm)	 Red disk	 Light green disk To be used on tough dirt	
DEEP CLEANING (250-400 rpm)	 Red disk	 Melamin disk Efficient with water	 Light green disk To be used on tough dirt
